

Boating safety

and collision prevention tips.

Did you know most boating accidents are caused by human error?

1. Always be on watch

- Don't be distracted or impaired
- Use eyes, ears, binoculars, radar and radios
- Expect the unexpected

2. Assess risk

- Look for vessels
- What are they doing?
- Apply collision rules

3. Avoid collision

- Take action early
- Expect the unexpected and monitor effectiveness of action

4. Know your lights

- Ships pass red to red, port to port, traveling in opposite directions
- Steer clear when overtaking another vessel
- Lights indicate, type and length of vessel, work or activity in progress, at anchor, and special circumstances

5. Know your day shapes

- Day shapes are displayed on mast and include: a black ball, diamond, cone and basket
- Day shapes indicate type of vessel, work in progress, at anchor, and special circumstances

6. Know your sound signals

- Sound signals are used in maneuvering to alert other vessels when altering course
- One blast turning starboard and two blasts turning to port
- Danger signal warning to another vessel is 5 or more short blasts
- Sound signals are used in reduced visibility are varied depending on type of activity in progress

7. Give right of way

- Give right of way to working vessels displaying appropriate lights or day shape

8. Reduced visibility

- Reduce speed
- Use eyes, ears, and radar
- Keep running lights on
- Sound appropriate fog signal every 2 mins

9. Practice radar

- Radar can help assess the course and speed of vessels in the area
- Not all vessels have the same visibility on radar, small targets are hard to see in waves, rain or snow

Navigation rules save lives.

Educate everyone on board with NSCC's free boating collision prevention videos.
