

Customizing Safety Training

Developing safety training that combines industry standards with specific operational needs

Michelin North America (Canada) Inc.

For a large company like Michelin North America (Canada) Inc., worker safety is of paramount importance. When the company initiated a new North American policy for employees working at heights of more than 1.22 meters, Michelin plant managers in Bridgewater, Nova Scotia contacted NSCC to discuss the delivery of fall restraint training for its workers.

Michelin could have chosen a standard, off-the-shelf fall restraint training program but they wanted to incorporate their in-plant operational requirements and Michelin-specific safety procedures and processes into the training program. They came to NSCC in September 2009 to help them develop a custom program.

Solution

Working together, NSCC and Michelin's production and maintenance managers devised a one-day, in-plant program that included training in fixed collective devices and equipment, mobile collective devices and equipment, and the proper use of personal devices and equipment. In addition, employees underwent training in plant policy, to help give them a deeper understanding of their safety responsibilities for themselves and others

when working or preparing to work at heights in the Bridgewater plant.

Result

By working closely with Michelin's production and maintenance management, NSCC gained the necessary background and knowledge to create a customized training program that met all of Michelin's expectations. The program has been delivered on site to over 200 employees so far, with excellent results.

Key to Success

NSCC's ability to customize and deliver the training to meet the unique needs of a specific employer.

Services

- Consultation and needs assessment
- Customized curriculum
- Training delivery
- Train the Trainer
 - comprehensive training package
 - training handout materials

Quick Facts

- Safety is of paramount importance at Michelin, so they turned to the safety training experts at NSCC.
- NSCC worked with Michelin's production and maintenance managers to create a customized safety training program, designed specifically for Michelin.

Customized Learning Solutions

NSCC offers organizations of all sizes, and operating in most sectors, customized learning solutions. If you're an employer, we can help train and develop the workforce you need to achieve your organizational goals. All of our services are designed in close collaboration with you and with your business and training objectives in mind.

Program Expertise

- Business
- Geomatics and Geographical Information Systems
- Healthcare, Social Services and Education
- Information Technology
- Manufacturing and Engineering Technology
- Oil and Gas, Renewable Energy and Water Resources
- Safety
- Skilled Trades and Construction
- Tourism and Culinary

About NSCC

Located on Canada's east coast, Nova Scotia Community College (NSCC) is a vibrant post-secondary institution and a national leader in applied education. NSCC employs over 800 faculty and curriculum specialists who work at campuses located across Nova Scotia.

We offer over 130 certificate, diploma, and advanced diploma programs in a wide range of occupational areas. Each of our programs is developed with input from industry to ensure the training we offer prepares students with skills that are current and in-demand by employers.
